A. Mean posterior P(susceptible), by TRUE state
C should be low, P high; L is genuinely ambiguous and should sit between.
P(susceptible)
1.0
0.8
0.6
0.4
C (cured)
L (latent)
P (progressing)

B. AUC: P(susceptible) against true membership
AUC
0.95
0.94
0.93
fitted
low_cure
null
rate_only
C. corr(alpha_i, delta_i) among estimated accumulators
Truth: alpha and delta are independent. Medians correlate anyway; draws should not.
