

A. Rate curve $r(y)$: all replicates

One posterior median per simulated dataset, against the truth.
Dashed = the true floor μ_b ; dotted = threshold.

— posterior median — truth

B. Each replicate, with its 95% band

Grey = outside the range of that dataset, where the curve is prior-driven.

— posterior median — truth

baseline, replicate 1

A. Aligned on the calendar axis

$a - \alpha_i$. Subjects still spread apart: each travels at its own speed.

B. Aligned on the clock axis

$e^{\delta_i}(a - \alpha_i)$. One shared curve, if the model holds.

baseline, replicate 1

A. Observed

B. Fitted

C. Observed minus fitted

A drift with age would mean the shared curve is the wrong shape.

baseline, replicate 2

A. Aligned on the calendar axis

$a - \alpha_i$. Subjects still spread apart: each travels at its own speed.

B. Aligned on the clock axis

$e^{\delta_i}(a - \alpha_i)$. One shared curve, if the model holds.

baseline, replicate 2

A. Observed

B. Fitted

C. Observed minus fitted

A drift with age would mean the shared curve is the wrong shape.

baseline, replicate 3

A. Aligned on the calendar axis

$a - \alpha_i$. Subjects still spread apart: each travels at its own speed.

B. Aligned on the clock axis

$e^{\delta_i}(a - \alpha_i)$. One shared curve, if the model holds.

baseline, replicate 3

A. Observed

B. Fitted

C. Observed minus fitted

A drift with age would mean the shared curve is the wrong shape.

baseline, replicate 4

A. Aligned on the calendar axis

$a - \alpha_i$. Subjects still spread apart: each travels at its own speed.

B. Aligned on the clock axis

$e^{\delta_i}(a - \alpha_i)$. One shared curve, if the model holds.

baseline, replicate 4

A. Observed

B. Fitted

C. Observed minus fitted

A drift with age would mean the shared curve is the wrong shape.

baseline, replicate 5

A. Aligned on the calendar axis

$a - \alpha_i$. Subjects still spread apart: each travels at its own speed.

B. Aligned on the clock axis

$e^{\delta_i}(a - \alpha_i)$. One shared curve, if the model holds.

baseline, replicate 5

A. Observed

B. Fitted

C. Observed minus fitted

A drift with age would mean the shared curve is the wrong shape.
